50 Optical Power Meter

Preview

The OPM-50 Intelligent Optical Power Meter offers accurate fibre optic testing with automatic wavelength identification, remote reference value setting, and FTTx compatibility. Compatible with the SLS-50, the OPM-50 can automatically identify the wavelength of the optical signals transmitted from SLS-50 and switch to the corresponding test mode, reducing test. Fiber Power Meter & Optical Light Source Kit (-50 to +26 dBm, single-mode) This tool kit provides everything you need to measure power and provide a stable light source for fiber optic cable testing. The term usually refers to a device used for measuring the average power in fiber optic systems. The power meter features a built-in 2mW visual fault locator (VFL) and network cable tester/remote. The Jonard. Keysight optical power meters measure optical signal strength, providing multi-channel measurement processing and system control while offering rapid response times, wide dynamic range, and simple integration into automated test setups.

OverviewPower measuring rangeSensorsCalibration and accuracyExtended sensitivity metersPulse power measurementCommon fiber optic test applicationsTest automationA typical OPM is linear from about 0 dBm (1 milli Watt) to about -50 dBm (10 nano Watt), although the display range may be larger. Above 0 dBm is considered "high power", and specially adapted units may measure up to nearly + 30 dBm (1 Watt). Below -50 dBm is "low power", and specially adapted units may measure as low as -110 dBm. Irrespective of power meter specifications, testing below about -50 dBm tends to be sensitive to stray ambient light leaking into fibers or connectors. So when testing at "l
