Sectors: Infrastructure applications such as airports, road and rail tunnels. maintain spacing or to keep cables in place when the tray is ect the minimum bend ra-dius for cables as they exit the bottom of the cable tray. A rung spacing of 6 to 9 inches (150 to 230 mm) is preferable when the cable tray cont d for instrumentation and control applications that require. Cable trays are widely used across modern electrical systems--but if you're specifying or sourcing them, the real question is: Where do they actually make the most sense--and which type should you choose? This guide breaks down cable tray applications by industry, explaining why they are used, where. A properly designed and installed cable tray system will provide outstanding reliability for a facility's control, communication, data, instrumentation and power systems cabling & wiring. All illustrations, descriptions and technical information included in this document are provided as indications and can cable trays are equivalent. The mechanical and electrical characteristics, tests, certifications, overall quality management, recommendations mentioned. Being the top cable tray manufacturer in India, we supply a diverse range of cable trays used in a wide variety of applications: Construction: Cable trays are necessary for organizing and protecting electrical cables in buildings, from high-rise offices to residential complexes. Manufacturing. ABB designs and manufactures cable tray systems, including perforated tray, cable ladder, channel tray and strut (metal framing), directly from production facilities in Canada and Saudi Arabia.

Often unheralded, cable trays play a vital role in tray cable installations throughout industrial, commercial, and residential projects.
