Optical fiber is used by telecommunications companies to transmit telephone signals, Internet communication and cable television signals. It is also used in other industries, including medical, defense, government, industrial and commercial. In addition to serving the purposes of telecommunications, it is used as light guides, for imaging tools, lasers, hydrophones for seismic waves, SON. OverviewFiber-optic communication is a form of for from one place to another by sending pulses of or through an. The light is a form of. First developed in the 1970s, fiber-optics have revolutionized the industry and have played a major role in the advent of the. Because of its advantages over electrical transmission, optical fiber. In 1880, and his assistant created a very early precursor to fiber-optic communications, the, at Bell's newly established in.

Optical fiber communications use access lines known as fiber-to-the-home (FTTH), fiber-to-the-premises (FTTP), and fiber-to-the-room (FTTR). These access lines
