

Article Overview

Double-layer extra-large distribution boxes are heavy-duty, double-wall cardboard boxes designed to protect and transport large or fragile items safely.

Construction and Strength

Double-layer, or double-wall, boxes are made from two layers of corrugated cardboard with fluted sheets in between, providing exceptional strength and durability . This construction offers enhanced resistance to knocks, shocks, and drops, making them ideal for shipping heavy or fragile goods . The double flute also provides cushioning, protecting contents during transit . Many boxes are capable of holding up to 40 kg or more, depending on size and material grade .

Sizes and Types

These boxes come in a wide range of extra-large dimensions, suitable for industrial shipping, storage, or distribution of bulky items such as appliances, sports equipment, or electronics . Options include standard double-wall boxes and multi-depth boxes, which allow flexibility in packing and can accommodate varying product heights . Some suppliers also offer pallet-sized double-wall boxes for easier handling and stacking .

Applications

Double-layer extra-large boxes are commonly used for:

- o Industrial shipping of heavy machinery or equipment
- o Fragile items like glassware, ceramics, or electronics
- o Warehouse storage and distribution
- o Export packaging, including airfreight and international shipping

Additional Features

- o Eco-friendly options: Many boxes are made from 100% recycled content .
- o Customizable: Boxes can be tailored in size, printed with logos, or designed for specific products .
- o Ease of use: Supplied flat for storage efficiency and easy assembly .
- o Bulk availability: Sold in packs or large quantities with delivery options . For purchasing, suppliers like Davpack, Macfarlane Packaging, and CardboardBoxes.co.uk offer a wide selection of double-layer extra-large boxes with next-day delivery and expert guidance on choosing the right box for your needs .
