

Electrical distribution box set up at the exhibition booth

Preview

A detailed floor plan is crucial for the electricians setting up your booth. It should include a scale, booth orientation, the Main Drop Location (MDL), and power distribution points with exact measurements. The MDL is where power enters your booth and is then distributed. The following are five basic exhibit booth electrical needs. Understanding Your Power Needs Most trade shows sell power in these units, so knowing your wattage needs is essential. Not sure. Power Maintenance Socket Box (metal) Various sizes for enclosure Customised serve for components inside Indoor or Outdoor use 1. Keep in mind that this topic can vary significantly from booth to booth, so this piece will only be a guide. The bearing frame of box is made of cold-formed rectangular welded steel pipe, casing cover used with 10mm thick steel 304 material, the surface drawing processing, or use high-quality 10mm tread plate, high strength wear-resistant surface coating paint which can withstand wheels and other.
