While many different types of fiber optic cable exist, singlemode fiber (SMF) and multimode fiber (MMF) appear most often in tower installations. In general, SMF can operate at a higher bandwidth than MMF. Proterial Cable America's cell tower cables are built for long-term durability and consistent signal transmission in harsh, demanding environments. Designed to support wireless networks at scale, these solutions deliver the performance trusted by vendors who support top wireless carriers like. Hybrid Trunk Cables and Fiber-to-the-Antenna (FTTA) Jumper Cables streamline tower deployments, reduce installation time and simplify routing by utilizing a single-run solution that merges copper power connections and high-performance fiber to the tower. It provides the speed, capacity, and reliability needed to support the networks of today and tomorrow.
