

Galvanized steel cable trays are used for cable management

Preview

Galvanized cable trays are essential for supporting insulated electrical cables used in power distribution and communication. The galvanization process adds a zinc coating that helps prevent corrosion. Meticulously crafted for seamless cable routing and enhanced protection, these trays embody both robustness and. A galvanized cable tray is made from steel that is coated with a layer of zinc. Due to their corrosion-resistant abilities, the GI tray systems are preferred over aluminum or plastic. SFSP cable trays and accessories from SFSP are manufactured from steel sheets in accordance with BS EN 10130/BS EN 10131/ BS EN.
