This can be seen by navigating to the Switch > Monitor > Switches > Switch Details page for a specific switch, then selecting the Power tab. The Catalyst Center Power over Ethernet (PoE) enables you to monitor the PoE-capable devices in your network. It also monitors the power summary of switches supplying PoE, which provides information such as a switch's power budget, used power, remaining power, and power usage. Power monitoring works with Cisco intelligent power management and CDP-based power consumption features to ensure that the PoE port can supply. A PoE switch is a network switch that utilizes PoE technology to transmit power and data over the same Ethernet cable to powered devices such as IP cameras, wireless access points, and VoIP phones, simplifying installation and reducing maintenance costs. You can enable PoE information polling on SNMP-polled. Security Camera VMS. Gigabit switches are great for display stations that require higher bandwidth, if network topology requires cascading multiple switches, for locations where multiple o camera operations. This is why network switch monitoring is.
