

Price of Portable Three-Level Distribution Box

Article Overview

Portable three-level distribution boxes typically range from \$200 to \$800 depending on amperage, phase configuration, and waterproof rating.

Price Overview

- o Factory and wholesale options: A 63A 3-phase portable power distribution box with IP67 protection can be found at factory prices starting around \$200 to \$350 for standard models suitable for stage or event use (ABS construction, waterproof) .
- o Industrial-grade units: European or high-quality industrial boxes with RCBO protection, multiple single-phase sockets, and IP44/IP67 ratings are priced higher, typically \$500 to \$800, reflecting durable construction, stackable design, and enhanced safety features .
- o Retail and consumer options: On platforms like Amazon, portable power distribution boxes for temporary or light-duty use may cost \$250 to \$600, depending on amperage, number of outlets, and material quality .

Key Features Affecting Price

- o Amperage and Phase: Higher amperage (e.g., 63A) and three-phase configurations increase cost.
- o Waterproof Rating: IP44 vs IP67 ratings affect durability and suitability for outdoor use.
- o Material and Build: ABS or polyamide enclosures with shock resistance and corrosion protection are more expensive.
- o Safety Features: Built-in RCBOs, circuit breakers, and elevated bases for safety add to the price.
- o Portability: Stackable, compact designs with handles or wheels may increase cost slightly.

Recommendation

For industrial or event applications requiring reliable outdoor use, consider units with IP67 protection and RCBO circuit breakers, which typically fall in the \$300-\$800 range. For lighter or temporary indoor use, factory-priced ABS boxes starting around \$200 may suffice. Selecting the right model depends on your current requirements, number of sockets, and environmental conditions. Always verify the amperage and phase compatibility with your equipment before purchase.
