A wall-mounted distribution box is an electrical structure that is attached directly to a vertical surface. It usually holds control devices, 600V DC circuit breakers, and contactors. The actual wiring then begins: the main supply line from the house connection is connected, as are the individual circuits that will later supply the rooms with electricity. It supports different cable sizes and types, enabling smooth and fast power distribution. This installation method offers several advantages including simplified installation procedures, enhanced accessibility for maintenance, and easier cable management.
