

What is a railway signal terminal box

Preview

It is a building from which railway signals and points (also called switches or turnouts) are operated. The primary function of a signal box is to control the movement of trains, ensuring that they run safely and efficiently on the railway network. Class 66 at Bardon Hill signal box in Leicestershire, England. On a rail transport system, signalling control is the process by which. A Class 66 locomotive (right) is waiting at a red signal while a First Great Western (now Great Western Railway) passenger train (left) crosses its path at a junction. Do you realise you may have infringed Rule 72 (a)? Rule 72 (a) prohibits unauthorised persons from entering a signal box But that's OK, don't worry, we like visitors. This guide gives an overview of one of the most distinctive types, the signal box. They comprised an elevated and well-glazed operating.
